WARNING!! ALWAYS USE PROPER EYE PROTECTION WHEN PERFORMING ANY MECHANICAL REPAIRS TO A VEHICLE – INCLUDING, BUT NOT LIMITED TO, ANY INSTALLATION AND OR REPAIRS TO THE DELCO REMY ALTERNATOR. FAILURE TO USE PROPER EYE PROTECTION CAN LEAD TO SERIOUS AND PERMANENT EYE DAMAGE.

Only perform the mechanical functions that you are properly qualified to perform. Mechanical repairs that are beyond your technical capabilities should be handled by a professional installation specialist.

DANGER!! To avoid injury or damage, always disconnect the negative cable at the battery before removing or replacing the alternator. The alternator output terminal is always live (“hot”). If the battery is not disconnected, a tool accidentally touching this terminal and ground can quickly get hot enough to cause skin burn or damage to the tool and surrounding parts.

The proper assembly of parts before attaching stator and diode trio is illustrated in Figure 1. Assemble "R" terminal connector over rectifier bridge threaded stud and then attach the stator and diode trio.

To assemble the alternator:

1. Clean brushes with soft dry cloth.
2. Insert a pin or toothpick to retain springs and brushes in holder.
3. Remove tape from shaft and from end frame.
4. Assemble drive end frame to slip ring end frame.
5. Remove pin or toothpick.
6. Install bearing flush with housing. Carefully note Figure 2.
