OE Applications for Navistar

We have complete coverage for all your Navistar vehicle needs! Our Delco Remy starters and alternators are very interchangeable with all competitive brands that may be installed on a truck. This means we can help you consolidate your inventory to meet a variety of application needs. Plus, you benefit from the longer life cycle and availability of our products—not to mention our superior service in the field for all of your technical and customer inquiries. When you need to keep your Navistar vehicles on the road, count on us to keep you moving.

Tech Tip: Mounting Holes on Newer All-Makes Starters

Some of our newer all-makes starter models have larger mounting holes—this makes them more versatile as they are able to fit engines with either size bolt. The mounting holes on newer models are five-eighths of an inch. That's slightly larger in diameter than the nine-sixteenths of an inch on the older models. That difference, though, doesn't limit if and where you can use the starter.

The solution to accommodate the larger holes is quite simple and inexpensive. All you need are flat washers. We recommend a grade 5 or better washer for each of the mounting holes. This flat washer accommodates the change in bolt hole size without needing anything more.

Our latest tech tip video explains the larger mounting holes on the all-makes starter models. Watch it on the **BorgWarner YouTube channel**.

Find Helpful Info Online

If you want to verify if you have the right starter for your application, be sure to check out our [online catalog](#). Search by part number, application, family or service part to quickly find what you need. And for further diagnostics, troubleshooting or other questions, you can contact the Technical Support Team.

BorgWarner Refrigeration Program Keeps Critical Components Moving

Refrigeration and APU units are a critical transportation component for fleets that carry food, chemicals, pharmaceuticals and other temperature-dependent goods. That means reliability is everything—the integrity of these products being transported depends entirely on the unit being fully functional. And alternators and starters are a key part of that.

We can help you through our BorgWarner Refrigeration and APU Program. With this program—which extends our product line and expertise to transport refrigeration units—you can offer your customers aftermarket starters and alternators for nearly any Thermo King, Carrier Transicold and RigMaster refrigeration or APU model.

The program offers many benefits, including:

- **One-stop shop:** You have expanded product line coverage—all from a single source
- **Cost-savings:** 20%-30%, compared to OEM units
- **Superior customer service:** Before, during, and after the sale

Watch Ed Clayton, a Regional Sales and Service Manager, talk about the benefits of this program, testing protocol and what's available. Watch the video on the **BorgWarner YouTube channel**.
