There are two designs of belts and pulleys found on modern vehicles:

- The alternator you have purchased may not have a pulley installed, or it may be the incorrect pulley for your application. It may be necessary to transfer the original pulley from the old alternator to the replacement alternator.
- The number of grooves in the belt must match the number of pulley grooves.
- Never use a V-belt with a serpentine pulley, or a serpentine belt with a V-pulley. Doing so may result in belt failure.
- The alignment of the alternator pulley to the other pulleys in the system is critical. Misalignment may result in belt wear and failure.
- Torque newly-installed pulley to 75-90 ft. lbs.
